

better than ftp

Instantly share files securely.
No IT help needed.

Today, FTP sites are being used to share files and documents through the design and construction phases of a project. In spite of FTP's advantages, we have seen the problems with using File Transfer Protocol technology first hand. Among other things, security, revision control, reliability, confusion locating files, and the inability to alert the project team

of changes to folders, have made these solutions vulnerable to failure.

We launched iShareDocs to address the failures of FTP, CDs, and Email. We have built the "killer app" to share files within our industry. Please contact your local Napco Rep to find out more or find out how you can participate in a FREE TRIAL.

top 5 reasons to try

| | |
|---|---|
| 5 | Easily share files with project and folder level security |
| 4 | No IT staff needed |
| 3 | Auto Email alert when new uploads are made |
| 2 | Revision control with time and date stamp |
| 1 | A private, secure site is ready in minutes |

Who should use iShareDocs?

- ▶ Architects
- ▶ Developers
- ▶ Engineers who share files
- ▶ Property Managers
- ▶ Facilities Managers
- ▶ Anyone who shares files or uses an FTP site or needs offsite back-up/archival
